

## **Why our program, what makes us different?**

We are a Grass rooted project offering a program like no other, the Lion Program was designed to target the negative behaviour around the trauma.

After years of researching the field i found that we all have a dual ADHD and Autism pathway. The program targets the negative behaviour using cognitive and sensory tools to enable the person to live a life free from the grips of trauma. But to do this, you must put the work into yourselves.

During the test studies both in the community and prison, i found that we all have the same negative behaviour produced by the changes in our brains during childhood development. For more information regarding this area, download our free supporting research and science paper.

We all have a dual foundation of Autism and ADHD behaviour. Which is showed below on the scales below.

### **Childhood trauma.**

**ADHD-----^-----Autism.**

Male hormones (outwards behaviour) creating a higher level of ADHD on the scales.

Female hormones (inwards behaviour) creating a higher level of Autism on the scales.

The higher the levels of childhood trauma= the opening of the dyslexia pathways.
